

# SnapStreets

by ParametriX

## Kit Guide

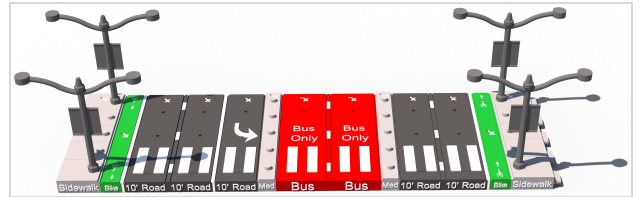

START HERE / SIDE 1 OF 2

A physical modeling kit that turns roadway planning into a **hands-on, creative experience**.

SnapStreets builds roadway cross-sections the way you draw them — element by element, curb to curb. Every module carries its own label on the face, so a finished model reads like a typical section: **Sidewalk · 10' Road · 10' Road · Danish · 10' Road · 10' Road · Sidewalk**.

Use it at an open house to let people rebuild the street in front of them, at a design charrette to test a lane reallocation in seconds, or on a desk to explain why a 12-foot shoulder and a 10-foot lane are not the same trade.

Three families of parts, three moves. Everything else is combination.

A completed model — center-running BRT lanes between two-way general purpose traffic, with protected bike lanes behind each curb.

### MOVE 1

#### Build the deck

Roadway modules snap edge to edge on a common joint. Order them left to right exactly as the cross-section reads. Each face is labeled with the element and its nominal width, so the model is self-documenting.

### MOVE 2

#### Add the markings

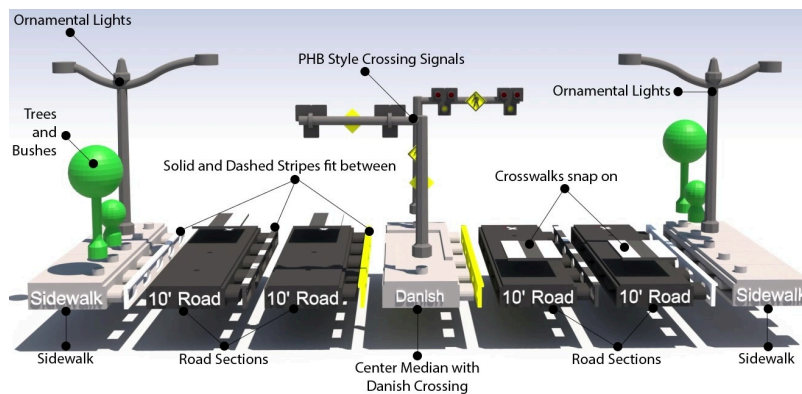

Solid and dashed stripes drop into the joints *between* modules — move a stripe and you have moved a lane line. Arrows, crosswalks and bicycle buffer striping snap down onto the surface of a road section.

### MOVE 3

#### Set the verticals

Poles, signals, signs, walls, shelters and landscaping plug into the sockets molded into the deck. Lighting, signal type and sign structure are swappable without rebuilding anything below.

## Anatomy of a section

Pedestrian safety configuration, exploded. Deck modules carry their own labels; markings sit in the joints or on the surface; verticals plug in from above.

## Five steps to your first cross-section

### 1. Lay the deck

Start at one curb. Snap sidewalk, road and shoulder modules edge to edge.

### 2. Drop in the stripes

Slide solid and dashed stripes into the joints to set lane lines and edge lines.

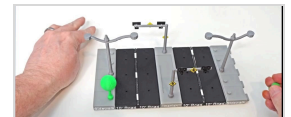

### 3. Set the median

Add a median, Danish crossing or concrete barrier at the centerline.

### 4. Snap on the surface

Turn arrows, crosswalks and bike buffer striping press onto the road face.

### 5. Plug in the verticals

Finish with lighting, signals, signs, walls, shelters and street trees.

### Read the model like a plan sheet

The label printed on each module is the element it represents, not the size of the plastic. Read the faces left to right and you have the section call-out; add up the numbers on the road modules and you have the roadway width. Flip a **Fill** wedge over and it becomes a **Cut** — the same piece works on either side of the grade line.

Agency staff rebuilding a corridor cross-section at a design workshop.

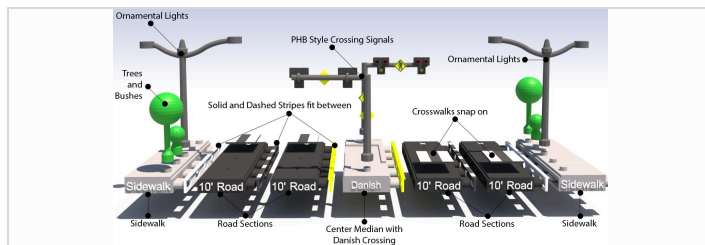

### Parts key

| Roadway modules | DECK                                                                        | Markings                    | SNAP ON                                                                                                         | Vertical elements | PLUG IN                                                                    |
|-----------------|-----------------------------------------------------------------------------|-----------------------------|-----------------------------------------------------------------------------------------------------------------|-------------------|----------------------------------------------------------------------------|
| <b>Sidewalk</b> | <b>Sidewalk</b> — curb, gutter and walk; the end module of an urban section | <b>solid</b>                | <b>Solid stripe, yellow</b> — centerline or left edge line; fits the joint between modules                      | <b>light</b>      | <b>Cobrahead light</b> — highway and arterial luminaire                    |
| <b>10' Road</b> | <b>Road section, urban</b> — general purpose travel lane                    | <b>solid</b>                | <b>Solid stripe, white</b> — right edge line and channelization                                                 | <b>light</b>      | <b>Ornamental light</b> — pedestrian scale, single or twin arm             |
| <b>12' Road</b> | <b>Road section, highway</b> — freeway travel lane                          | <b>dashed</b>               | <b>Dashed stripe, white</b> — lane line between travel lanes                                                    | <b>light</b>      | <b>Decorative street light</b> — twin arm, urban street                    |
| <b>Shldr</b>    | <b>Shoulder</b> — inside and outside shoulders                              | <b>arrow</b>                | <b>Turn arrow</b> — presses onto the face of a road section                                                     | <b>signal</b>     | <b>Traffic signal, mast arm</b> — signal heads with warning signs          |
| <b>Danish</b>   | <b>Center median, Danish crossing</b> — offset pedestrian refuge            | <b>crosswalk</b>            | <b>Crosswalk</b> — ladder-style bar pattern; snaps across road sections                                         | <b>signal</b>     | <b>PHB crossing signal</b> — pedestrian hybrid beacon assembly             |
| <b>Med</b>      | <b>Center median</b> — narrow raised separation                             | <b>buffer</b>               | <b>Bicycle buffer striping</b> — hatched buffer, snaps over the roadway beside a bike lane                      | <b>sign</b>       | <b>Gantry sign</b> — overhead sign bridge with oversized interstate shield |
| <b>Bike</b>     | <b>Bike lane</b> — green surfaced lane or cycle track                       | <b>barrier</b>              | <b>Highway barrier</b> — concrete median barrier; seats in the center joint                                     | <b>wall</b>       | <b>Soundwall</b> — noise wall panel and post                               |
| <b>Bus</b>      | <b>Bus stop concrete</b> — concrete pad at the curb                         | <b>Scale &amp; labeling</b> | <b>HOW TO READ IT</b>                                                                                           | <b>transit</b>    | <b>Bus shelter</b> — canopy for the boarding island                        |
| <b>Shelter</b>  | <b>Shelter median</b> — boarding island that receives the shelter           | <b>width</b>                | Modules named with a number carry that <b>nominal width in feet</b> . Add them across to get the roadway width. | <b>landscape</b>  | <b>Tree</b> — canopy on a trunk; sets the street tree line                 |
| <b>Bus</b>      | <b>BRT running way</b> — center-running bus rapid transit lane              | <b>joints</b>               | Stripes live <b>between</b> modules; arrows, crosswalks and buffers live <b>on</b> them.                        | <b>landscape</b>  | <b>Bush</b> — low shrub for planter strips and medians                     |
| <b>Fill</b>     | <b>Fill / Cut</b> — earthwork wedge; flip it over for a cut                 | <b>sockets</b>              | Every deck module carries sockets on top — any vertical fits any socket.                                        |                   |                                                                            |
| <b>Ditch</b>    | <b>Ditch</b> — median or roadside drainage                                  |                             |                                                                                                                 |                   |                                                                            |

### Four configurations to build

#### Pedestrian Safety

2 LANES + REFUGE

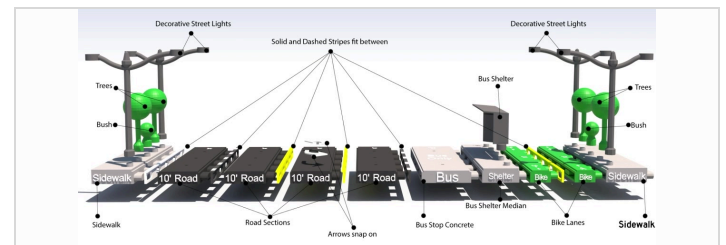

Sidewalk 10' Road 10' Road Danish 10' Road 10' Road Sidewalk

**Add:** PHB crossing signal, crosswalks across both approaches, ornamental lights, trees and bushes.

#### Cycle Track

4 LANES + PROTECTED BIKEWAY

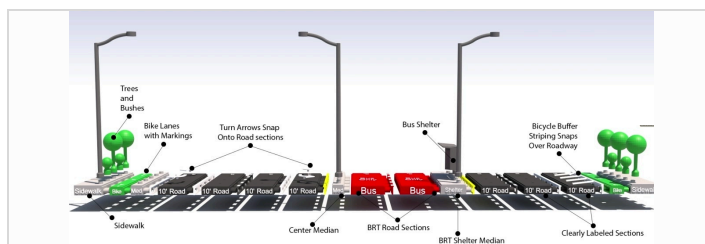

Sidewalk 10' Road 10' Road 10' Road 10' Road Bus Shelter Bike Bike

Sidewalk

**Add:** bus shelter on the median, turn arrows, decorative twin-arm lights, trees and bushes.

#### Bus Rapid Transit

CENTER RUNNING

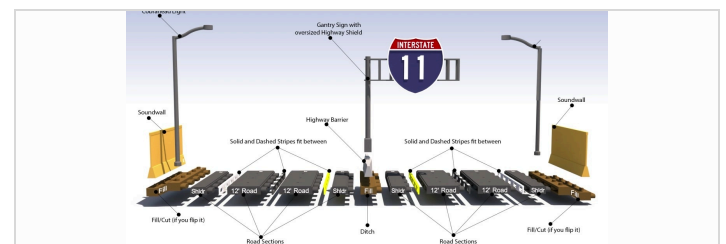

Sidewalk Bike Med 10' Road 10' Road 10' Road 10' Road Med Bus Bus

Shelter 10' Road 10' Road 10' Road Bike Sidewalk

**Add:** BRT shelter on the center median, bicycle buffer striping, turn arrows, cobrahead lights.

#### Highway

DIVIDED, 4 LANES

Fill Shldr 12' Road 12' Road Shldr Ditch Shldr 12' Road 12' Road Shldr Fill

**Add:** concrete barrier at the median, gantry sign with interstate shield, soundwalls behind each fill slope, cobrahead lights.
